

PDM Web Explorer

PDM Web Explorer is a highly configurable web catalogue viewer for publications created using PDM Builder. PDM Web Explorer is designed to utilize a number of advanced features contained in the PDM Builder application, including a configurable parametric search engine and User security.

Dynamic Catalogue views of Static Information

PDM Web Explorer is configured to display information autopublished from PDM Builder. Several specific elements can be included in the PDM Web Explorer datafile, including User Validation, Expiry Dates, Localized information including languages and currencies, display settings and search permissions, resulting in a dynamic catalogue view based upon User profiles.

Easy Catalogue Customization

PDM Web Explorer is a web-based application which uses XML and XSLT to display the information published in a PDM Explorer datafile. Catalogue branding elements are easy to configure within the stylesheets. PDM Builder stores and maintains all information for use in the catalogue, including graphics names and locations, hyperlinks and rich content, so most customization can be performed without the need of a Web Developer.

Shopping Cart Integration

PDM Web Explorer includes a Shopping Cart utility which can pass information to a Transaction Server, and enable the user to print a pick list or an offline Order Form.

Online and Offline Use

Catalogues produced in the PDM Explorer format are interoperable on the web and on a desktop PC, using the PDM Explorer Desktop, an XML catalogue viewer developed by Pricedex.

Embed Web-Compatible Components

Configurable stylesheets enable the inclusion of IE compatible plug-ins, such as Adobe Acrobat and Microsoft Excel.

Functions Include

- User Logon
- Parametric Catalogue Search and Display
- Multiple Catalogue Views
- Copy, Paste and Print functions
- Print Picklist / Load Shopping Cart

Operates on

- Windows / Linux / Unix
- Apache / IIS Web Servers
