

AutoPIM

Pricedex® AutoPIM™ is an innovative toolset designed to make it easy and quick to create aftermarket part information, and to communicate it to trading partners in the AAIA Product Information Exchange Standard (PIES). Now disparate sources of information can be loaded and managed in a centralized data repository, enabling companies to cleanse, validate, classify, map and export product information to its trading partners, and remain in synch at all times with customers.

Easy to Use, Easy to Share, Easy to Classify Data

AutoPIM is configured on the powerful PDM Builder PIM platform, and provides a browser-based interface to all the PIES attributes. Built-in rules and reporting ensure that all who need access to manage product information can see at a glance what needs to be done, to what information, to ensure completeness of PIES data. Easy to use classification utilities, with Smart Search capabilities, take the guesswork out of coding to the PCDB, UNSPSC, VRMS and HAZMAT standards.

DAC Pre-Certification Utility

AutoPIM has all the required rules loaded to ensure that PIES data will be 100% compliant with the AAIA Data Audit Certification (DAC) requirements, thus

ensuring certification will occur quickly, and that PIES data will continue to be of the highest certifiable quality, each time, and every time, a PIES file is created.

Flexible Imports, Flexible Exports

AutoPIM has an extensive import tool that enables the creation of ad-hoc or reusable import formats. Product data from other sources can easily connect and load to the system. Export specifications allow you to select language and currency requirements, and maintain up to 10 Customer profiles to define the products and pricing available for up to 10 different trading partners. Export file formats include both the PIES XML and PIES EXPRESS Excel format.

Auto PIM Key Features Include

- AAIA PIES compliant to v 4.2
- DAC Pre-Certification data validation
- PIES XML and PIES EXPRESS outputs
- PCDB, UNSPSC, VRMS, HAZMAT and all ISO and ANSI tables pre-loaded
- Easy to use Classification utilities
- Extensive Reporting features
- Store multiple trading partner profiles
